CLEAN & DISINFECT COVID-19: Safety on School Buses

At **National Passenger Services**, we are committed to the safety and well-being of our team members and the students that we transport. In order to ensure that we are providing the safest transportation during this pandemic, we have added enhanced cleaning and disinfecting regimens to our daily operations.

Daily Disinfectant

All drivers are equipped with a fast-acting, water activated disinfectant called **ProKure[®]** to clean and disinfect their vehicles twice a day; once before their AM route and again before their PM route. This powerful disinfectant is safe and leaves no harmful residues.

ProKure[®]

99.999%
effective at killing
harmful bacteria

CHLORINE DIOXIDE (ClO₂)
powered, and destroys over
30 types of viruses

**HEALTH CANADA
APPROVED**
to use against
COVID-19

Additionally, our drivers are:

- disinfecting high-touch surfaces throughout the day
- ensuring the first row of their bus is empty to encourage physical distancing
- wearing a face mask while driving, unless it causes a safety issue
- using gloves when touching surfaces that may be contaminated
